

# Troubleshooting Missing Curve Data in PDS

KB0122449

36 views

This guide provides step-by-step instructions on how to troubleshoot the issue related to missing curve data in PDS. Follow these steps to gather more details which helps to resolve the issue quickly:

**1. Verify Data in Insite:**

- a. Check the data in the Insite to confirm if it matches the expected curve data.

**2. Inspect InsiteAgent Info Log for Lograw Messages:**

- a. If the data in Insite does not match, examine the InsiteAgent info log for lograw messages with "Append" or "Append|stream" operations. These messages can provide insights into potential data discrepancies.

**3. Review Kafka Topics 'witsml' , 'rt\_data':**

- a. If InsiteAgent successfully sends the appropriate messages to the RTS, review the relevant messages in the Kafka topics 'witsml','rt\_data' to ensure data transmission is occurring as expected.

**4. Investigate InsiteAgent Error Logs (If Necessary):**

- a. In the event that InsiteAgent is not sending the correct data, check the error log for additional details. If discrepancies persist, promptly inform the InsiteAgent Team, providing all relevant information.

**5. Compare Data in Kafka Topic with Insite Data:**

- a. If the data in the Kafka topic aligns with the Insite data, notify the Platform team for further action.

**6. Report Discrepancies to InsiteAgent Team (If Data Mismatch Occurs):**

- a. If the data in the Kafka topic does not match the Insite data, inform the InsiteAgent Team immediately, providing all pertinent details for swift resolution.
