Fetching Witsml_SOAP log from the DATA DOG

Step 1:

Open Data Dog using the URL: https://us5.datadoghq.com/dashboard/wsk-3z7-9mu/rts-witsml-performance?fromUser=false&refresh_mode=...

Step 2:

Set the environment in the env filter as ep-azure or na-azure for UKS or USC environment respectively.

Step 3:

select the **Logs** option

Step 4:

In Services select only Witsml_SOAP for the Witsml logs.

Step 5:

Provide the respective filter parameters (Log ID, User ID, Well UID etc.)

If logs are needed for a specific time range without specifying any parameters, set the desired time range, and the logs for that period will be listed accordingly.

Step 6:

Download the result by clicking on Download as CSV button.

Select the number of logs to export. We can export up to 100k logs at a time. Then click on Export CSV.
